

$$D_S^{*+} \rightarrow D_S^+ e^+ e^-$$

Souvik Das, Anders Ryd
Cornell University

Contents

Dataset 47 230474 – 230617 has been skimmed. RePass2 in solaris failed abruptly. (Looking into this.)

`/nfs/cor/an2/souvik/Dataset47/pass2_230474_230617_sol.log`

Dataset 48 has been entirely staged. Have IDXA file. Am skimming.

Added photon information for reconstruction of D_s^* \rightarrow D_s gamma channel in ntuple. Brian suggested I put `e9oe25Unf` information into ntuple.

Ran ntuplizer over Dataset 47's physics data (`grade=dtag`), generic mc (`grade=mc-ddmix-dskim-tight`) and continuum mc (`grade=mc-cont-dskim-tight`). Generic MC is scaled by 20, continuum is scaled by 5. Have to make sure generic + continuum = physics. Making plot of dM with other cuts applied to make sure of this in all channels.
